

Wyeth (John) & Bro.

PAPOMA.

A Farinaceous Food for Infants and Invalids.

It contains all the elements requisite for strength.

MADE FROM THE WHOLE WHEAT, NOTHING BEING BOLTED OUT.

It is impossible to over-estimate the importance of proper nutriment for children, for the infirm, and for the aged. In infancy and childhood, the formation and development of the various tissues of the body, is the main phenomenon of life. In adults enfeebled by disease, the restoration of health depends greatly on an abundant supply of suitable material for the regeneration of the wasted organs. In old people, the powers of life need sustaining by similar means. And yet the mere furnishing of the necessary elements is not sufficient; those elements must be in such a form as to be readily digested, absorbed, and assimilated.

All these requirements are fully met in the article which we now offer,

PAPOMA.

SURGEON GENERAL
B112
LIBRARY

This is prepared from the entire kernels of the choicest Wheat, by a peculiar process of torrefaction or roasting. The apparatus for its manufacture is patented, and the grain is so treated as to retain all its constituents. Moreover, the starchy portions are in the process converted into dextrine, and the gluten, which in most dietetic preparations is sacrificed, is partially cooked, so that the result is a substance all ready for digestion and assimilation by the human organism.

Those who have had experience in the management of children and invalids will at once recognize the value of an article of this kind, and may depend upon Papoma as altogether the best in the market. We make this claim not upon theoretical grounds only, but as the result of the fullest test in the practice of many Physicians.

Our firm conviction of the value of Papoma, and of the public favor, which further trials of it can only increase, have led us to secure the exclusive control of its manufacture.

PAPOMA.

A Farinaceous Food for Infants and Invalids.

It contains all the elements requisite for strength.

MADE FROM THE WHOLE WHEAT, NOTHING BEING BOLTED OUT.

It is impossible to over-estimate the importance of proper nourishment for children, for the infant, and for the aged. In infancy and childhood, the formation and development of the various tissues of the body, is the main pre-occupation of life. In all the earliest years, the formation of health depends greatly on an abundant supply of suitable material for the regeneration of the wasted organs. In old people, the power of the aged, maintaining its usual means. And yet the mere furnish of the necessary elements is not sufficient; these elements must be in such a form as to be readily digested, absorbed, and assimilated.

All these requirements are fully met in the article which we

now offer.

PAPOMA.

This is prepared from the entire kernel of the whole wheat, by a peculiar process of treatment or roasting. The process for its manufacture is peculiar, and the grain is so treated as to be easily in consumption. Moreover, the starchy portions are in the process converted into dextrine, and the gluten, which is most difficult preparations is rendered, is perfectly cooked, so that the result is a substance all ready for digestion and assimilation by the human organism.

There is also a special advantage in the preparation of children and invalids with it, as it contains all the elements of life, and may be used as a substitute for the food in the infant, and may be used as a substitute for the food in the invalid. We make this statement with a full knowledge of the facts, and as the result of the most careful and accurate analysis.

Our own examination of the subject of Papoma, and of the public favor, which has been shown to it, and which has led us to secure the exclusive control of its manufacture.

PAPOMA

A Nutritious & Easily Digested Food,
FOR INFANTS AND ADULT INVALIDS.

Prepared by the

NUTRIO

Manufacturing Co.

1520 S. Ninth St.,

PHILA.

There can be no question, that a vast amount of the mortality among infants and young children is due to the improper or unsuitable food given them by their ignorant or injudicious care-takers. And those who are strong enough to survive the tests to which this bad management subjects them, are often stunted in growth and spoiled in temper, while the foundation is laid for much suffering in after life.

The great desideratum is a hearty and nourishing diet in an easily digestible form.

Many articles have been brought forward and some have been forced into extensive use, as answering the above requirements. But we feel confident that none have ever had the same claims as the one which we now offer.

PAPOMA

Is made out of the entire kernels of the choicest wheat, subject to a peculiarly thorough process of torrefaction or roasting, by means of patented apparatus. This apparatus, gotten up at great expense by the Nutrio Manufacturing Company, is open to the inspection of Physicians and Scientific men, at the works, No. 1520 South Ninth Street, in this City. The process of manufacture was explained and the products in the different stages of preparation were exhibited by the late Prof. Edward Parrish to the members of the American Medical Association when it met here in 1872, and attracted much favorable attention. Their commendation is perhaps the best testimony that could be given; the Association being composed of the most eminent medical men in the United States. The phosphates and all the constituents of the grain are retained,

the gluten cooked, and the starch converted into dextrine; and the result is that the elements necessary for the nutrition and support of the infant body are supplied in such a condition as to be easily digested and assimilated.

The superiority of this article over any mere starchy preparation, and over any flour obtained by the ordinary process of manufacture, is not only a matter of theory, but is amply verified by the results of experience.

Children to whom Papoma is administered as a diet are found to enjoy an easy digestion, and to thrive in every way under its use. They find in it a readily available supply of what their tissues and organs need for their nourishment and growth.

We therefore ask, with full confidence, for the most thorough trial of this admirable article, assured that it will make good all our claims. Every package will be accompanied with directions as to the manner of using it.

Let it be remembered that the method of preparation of Papoma is such as to afford a guarantee that it will not change by keeping. It will neither become stale nor wormy if ordinary care is observed, and will keep in any climate and on ship board.

In the remarks we have now made, we have spoken only of the comparison of this article with other vegetable preparations. It is hardly necessary for us to quote the many authorities who have borne testimony to the unsuitableness of meat extracts and juices for very young children;—valuable as these are for older invalids, they do not meet the requirements of the infant, upon whom they act as stimuli only. We feel certain that no such verdict can be brought in regard to Papoma, but that it will be found to be as we assert,

A NUTRITIOUS & EASILY DIGESTED FOOD.
